

Medical chronologies in **minutes**, not days.

The AI workbench for UK clinical-negligence and personal-injury solicitors. Source-anchored, barrister-ready, GDPR-compliant.

THE PROBLEM

A 5,000-page case file. 50 paralegal hours. One missed date and the case dies.

Every UK clinical-negligence and PI claim begins the same way: a fee-earner ploughs through hospital records, GP notes, A&E sheets and consultant letters to assemble a date-ordered medical chronology and a barrister-ready bundle. It is repetitive, expensive, error-prone, and the single biggest time sink in the practice area.

£2.4bn

Paid by NHS Resolution in clinical-negligence claims, FY2022/23

30-50 hrs

Paralegal time on chronology & bundle for a single complex case

~70%

Of medical records are scanned PDFs that off-the-shelf AI can't read

Upload the file. Get a verifiable chronology, a court-ready bundle, and a chat that cites every line.

01 / CHRONOLOGY

Auto-extracted, source-anchored

Every clinical event: date, provider, presenting complaint, diagnosis, treatment, relevance flag. Every entry cites a verbatim quote and a real page number. Treatment gaps and inconsistencies surfaced automatically.

02 / BUNDLE

Barrister-ready PDF in one click

Cover sheet, table of contents, full chronology, document index, watermark, page numbers, A4. Generated to the format counsel actually expects, not a print-to-PDF browser dialog.

03 / CHAT

Ask anything about the case

Vector-retrieved entries, GPT-4o reasoning, every answer cited back to a specific entry and source page. “Was there a pre-existing back condition?” — answered with evidence in seconds.

WHY NOW

Three forces converging in 2026.

CAPABILITY

Frontier models finally read medical PDFs

GPT-4o + Azure Document Intelligence handle the messy reality of NHS records: scanned, abbreviated, mixed handwriting and SNOMED codes. The 2024 generation could not. The 2026 generation can.

PRESSURE

Margins compressing under fixed-cost reform

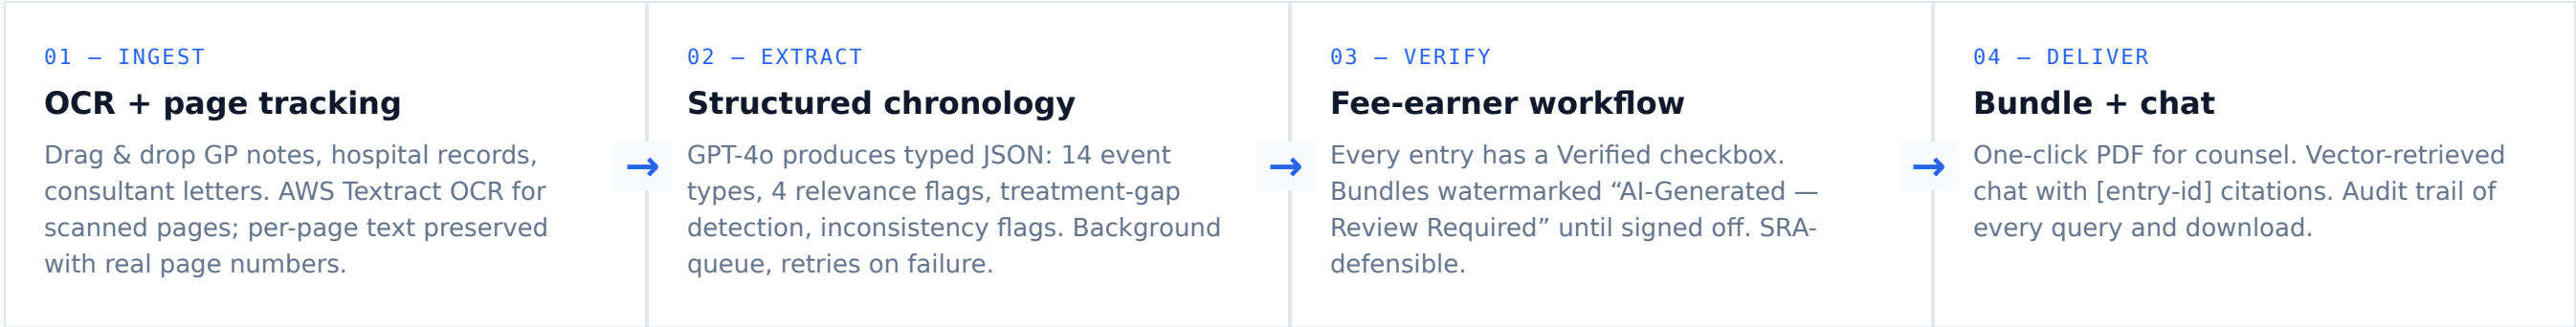

Civil Justice Council and MoJ proposals on fixed recoverable costs squeeze claimant firm margins. Firms must reduce paralegal hours per case or lose money on smaller-value matters.

COMPLIANCE

SRA and ICO now demand AI accountability

Generic ChatGPT use is a regulatory risk. Firms need legal-specific AI with audit trail, source citations, fee-earner verification workflow and UK data residency. Off-the-shelf tools don't qualify.

Built around the workflow, not bolted onto it.

- SOURCE-ANCHORED AI
- REAL PAGE CITATIONS
- UK DATA RESIDENCY
- AUDIT LOG ON EVERY ACTION
- NO TRAINING ON YOUR DATA

Every entry source-anchored. Every claim auditable.

Live dashboard from a real matter — chronology view, fee-earner verification workflow, AI-generated & review-required watermarks throughout.

Causation Critical

A focused wedge, with adjacent markets 10x the size.

SOM – STARTING POINT

£3.2M ARR

~150 specialist clinical-negligence firms in the UK (Chambers / Legal 500 / AvMA accredited). Average price £1,800 / month at the Growth tier.

SAM – BROADER PI

£40–60M ARR

~3,000 personal-injury firms across the UK who handle medical negligence as part of their caseload. Same tooling, same workflow.

TAM – ALL LITIGATION

£500M+

Family law, immigration, employment, criminal defence — every adversarial practice area runs the same chronology + bundle workflow. Globally larger.

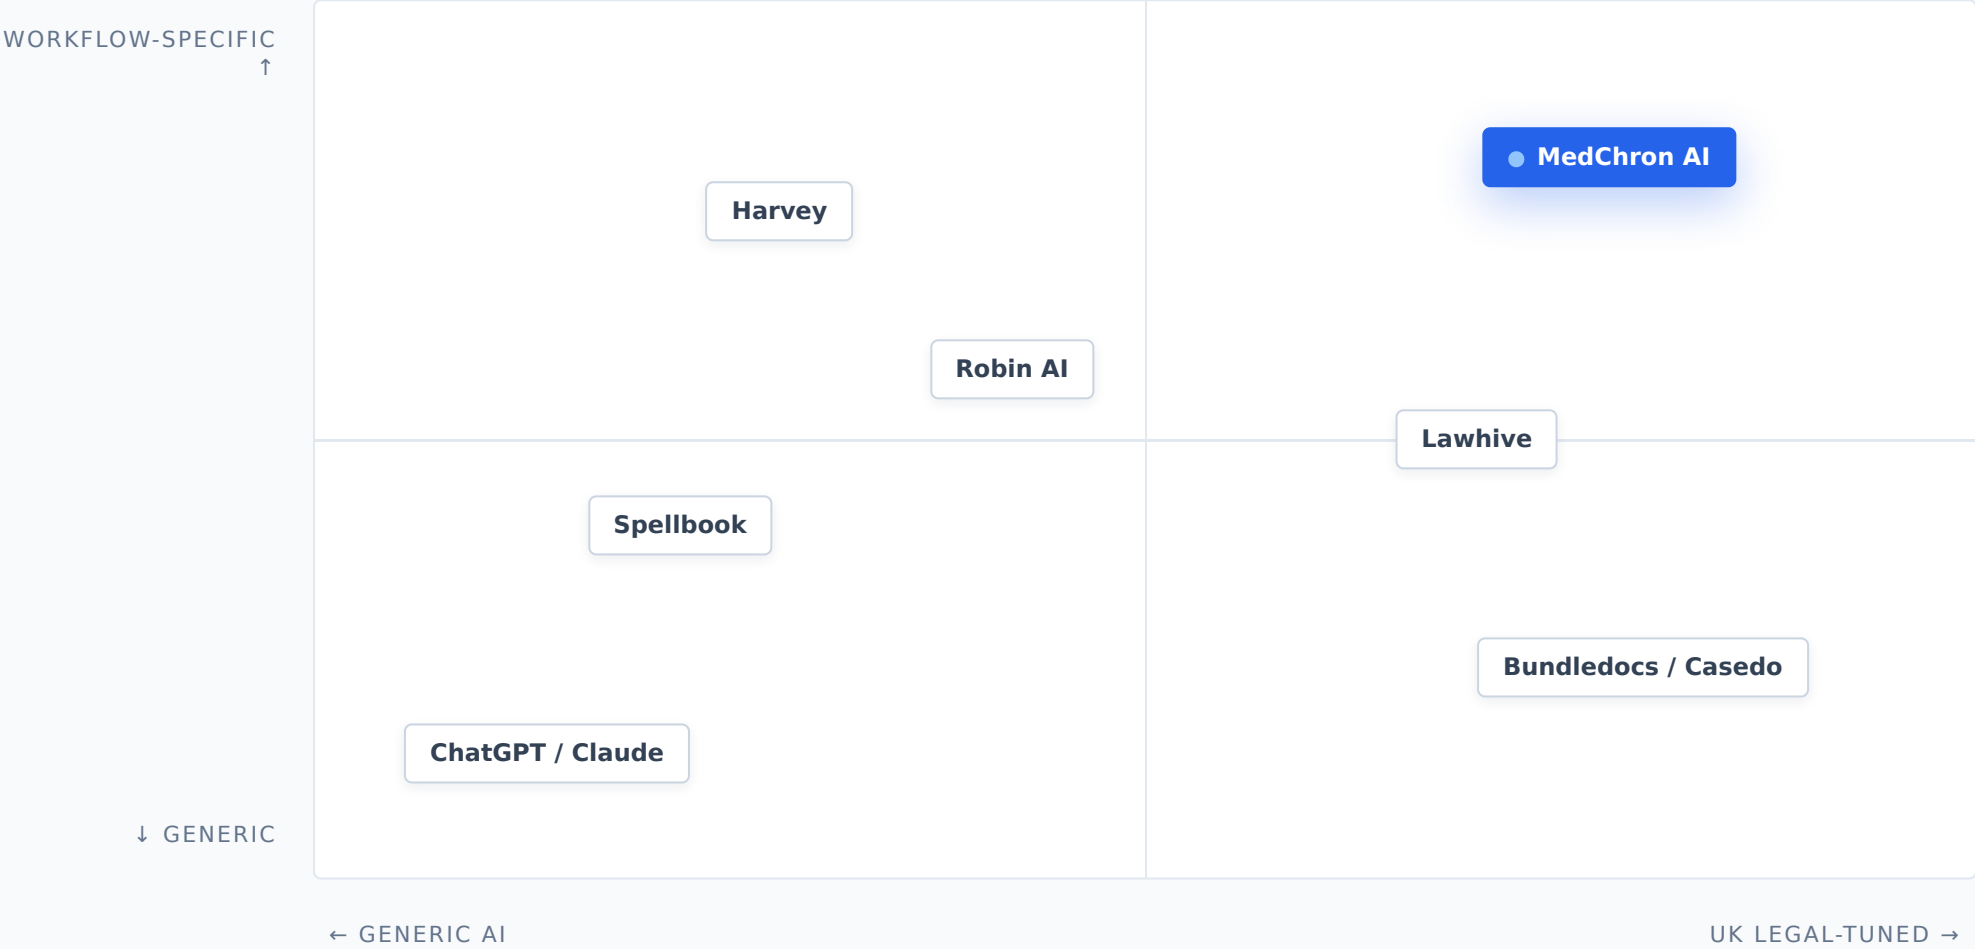

Sources: NHS Resolution Annual Report 2022/23, SRA Open Data, Chambers UK 2026, Legal 500 UK 2026, AvMA Specialist Panel.

Three tiers. £8 COGS per case. 87% gross margin.

TIER	PRICE	CAP	TARGET FIRM	COGS / CASE	MARGIN
Pay-per-case	£75 / matter	—	Pilots, sole practitioners	£8	89%
Starter	£500 / month	10 cases / mo	Boutique 5-15 fee-earner firms	£10	80%
Growth	£1,800 / month	50 cases / mo	Mid-size claimant firms	£10	72%
Enterprise	Custom	Unlimited + SSO + DPA	Top-30 claimant / NHS panel firms	£12	—

Net retention ~115% target: customers expand from Starter → Growth as they trust the verification workflow and onboard more fee-earners.

Generic legal AI doesn't solve clinical negligence. We do.

- Generic AI** Can summarise a paragraph. Can't handle 5,000-page scanned bundles, can't cite source pages, can't produce a court-ready PDF.
- Bundle-only tools** Manual indexing. No AI extraction, no chat, no causation analysis. Customers still pay 30+ paralegal hours.
- Horizontal legal AI** Built for transactions and contracts, not litigation. Don't understand SNOMED, NHS abbreviations, or barrister-bundle conventions.

The moat is not the model. It's the workflow, the data, and the trust.

01 / DATA EXHAUST

Every verified chronology improves the next one

Fee-earner edits are training signal. Domain-specific reranker + verification dataset compounds with every case — an OpenAI prompt cannot replicate this.

02 / WORKFLOW LOCK-IN

We're the system of record for chronologies

Once a firm has 6 months of cases, chronologies and verifications in MedChron, switching cost is high. Not a tool you swap mid-matter.

03 / COMPLIANCE

UK-only AI, signed DPA, ISO 27001 path

Azure OpenAI UK South + Document Intelligence + audit log per matter. Generic AI providers cannot match the Article 9 health-data DPA chain.

04 / DISTRIBUTION

AvMA, Chambers and Legal 500 referral network

First five customers become reference accounts. Specialist communities (AvMA, APIL) recommend tools they trust. We sit inside that recommendation engine.

Working product. Five design partners targeted. Public launch Q3.

What’s built today

- **End-to-end workflow.** Upload → OCR → AI chronology → bundle PDF → chat with citations. Live and tested.
- **UK compliance baseline.** AWS eu-west-2 storage, audit log, per-firm row-level security, 8-hour session timeout.
- **Background queue.** Inngest-driven worker, parallelised chunk processing, retries on failure.
- **Vector retrieval chat.** Top-25 entry RAG, [entry-id] citations streamed to UI.
- **Real PDF bundles.** Puppeteer-rendered A4 with header/footer and page numbering.

Next 12 months

- **Q1 — 5 design partners.** Free pilots with AvMA-accredited firms. De-identified files, real workflow stress test.
- **Q2 — Public launch.** First paying customers on Starter tier. £75/case + £500/mo SKUs live.
- **Q3 — Azure migration.** AI layer on Azure OpenAI UK South + Document Intelligence with signed enterprise DPA.
- **Q3 — Counsel co-product.** Direct invite-to-bundle workflow for instructed barristers. Two-sided distribution.
- **Q4 — Enterprise tier + SSO.** First top-30 firm. Cyber Essentials Plus + ISO 27001 in flight.

Land at the AvMA panel. Expand through Chambers Band 1.

Sales motion

Founder-led until £500K ARR. Direct outreach to clinical-negligence partners at the ~80 AvMA-accredited firms; free 30-day pilot with two cases of the firm's choosing; convert to Starter or Growth on day 31.

Channel partners

- AvMA referral panel listings
- APIL (Association of Personal Injury Lawyers) sponsorship
- Chambers/Legal 500 directory partners
- Two leading barristers' chambers as "recommends"

£250

CAC target — direct sales founder-led, year one

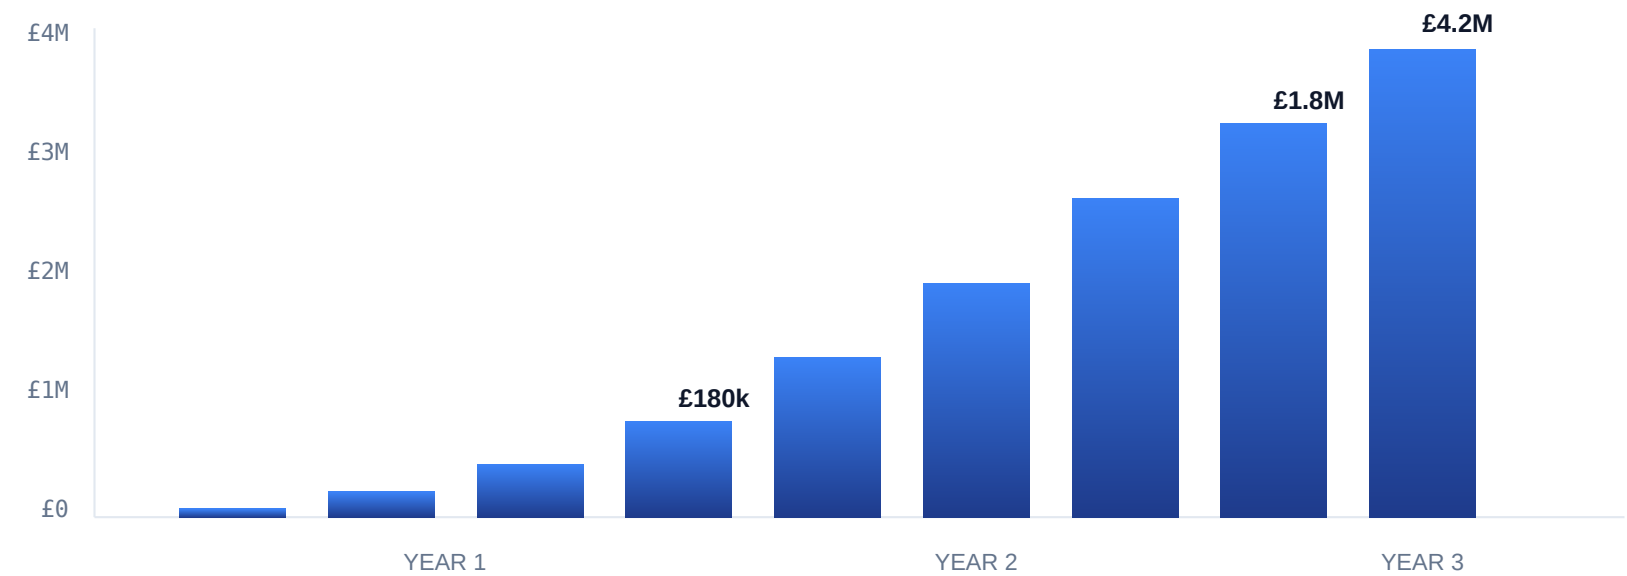

£14k

3-year LTV at Growth tier with 115% NRR

56x

LTV / CAC at year-three steady state

Path to £4M ARR in 36 months. Capital-efficient by design.

12

Paying firms by end of year 1

80

Paying firms by end of year 2

200+

Firms by year 3, plus first counsel revenue

Pre-seed raise to convert a working product into ten paying customers.

£350k

SAFE at a £3M post-money cap. 18-month runway. Capital-efficient: enough to ship the Azure compliance posture, sign first 12 customers, and reach the milestones a seed round needs.

Milestones to seed: £40k MRR, 12 paying firms, ISO 27001 certified, NHS Resolution-panel firm in pilot, Azure UK South AI stack live. Targeted seed round £2M at £10–12M post in month 18.

45%	Founding solicitor + ML engineer hires	£158k
25%	Founder & AE compensation, year one	£87k
15%	Azure infra, OCR & LLM at pilot scale	£52k
10%	ISO 27001, Cyber Essentials Plus, legal	£35k
5%	Marketing & AvMA / APIL events	£18k

Let's build the workbench UK litigation deserves.
